學術演講公告

主講人：李彥寰教授（台灣大學 資訊工程學系）

講題：From universal coding to learning quantum states

時間：112 年 11 月 14 日(星期二) 下午 2:00 –3:00

地點：(光復校區) 科學一館 223 室

Abstract

This talk will cover three closely related problems: universal coding for data compression, online portfolio selection for long-term investment, and online learning of quantum states for quantum state tomography. While the application scenarios appear distinct, these problems share similar mathematical structures. I will offer a brief introduction to all three problems and delve into state-of-the-art results for the latter two.
