Reference for Setting Journal Points

Revised on December 4, 2019

1. Based on the classification of SCIE journals in the Journal Citation Reports, points are determined according to the percentage derived from the order of the journal's 5-Year Impact Factor in its respective field. For example, if there are 100 journals in the field of Journal A, and Journal A is ranked 8th, its percentage is 8%.
2. Journals within the top 5% (inclusive) are assigned 3.5 points;
Journals between 5% (exclusive) and 30% (inclusive) are assigned 3 points;
Journals between 30% (exclusive) and 55% (inclusive) are assigned 2.5 points;
Journals between 55% (exclusive) and 75% (inclusive) are assigned 2 points;
Journals between 75% (exclusive) and 100% (inclusive) are assigned 1.5 points;
Journals that have SCIE but no 5-Year Impact Factor are assigned 1.5 points;
Journals without SCIE are assigned 1 point.
※ If a journal falls within 3% (inclusive) of the lower limit of any percentage range, the higher points within that range may be applied.
3. If the same journal appears in more than one field, the highest points from any of the relevant fields will be taken as its points.
4. Suggestions for minor adjustments to the points of a specific journal can be submitted to the Faculty Evaluation Committee; adjustments will generally be made in increments or decrements of 0.5 points.
